

CPSC_V 430 921 2026SS Computers and Society

Based on: <https://www.cs.ubc.ca/~kevinlb/teaching/cs430/index.html>
(<https://www.cs.ubc.ca/~kevinlb/teaching/cs430/index.html>)

The syllabus may be subject to changes and reviews before the course starts (and, to a lesser extent, during the course).

Welcome to CPSC 430 - Computers and Society!

This course explores the interplay between information technology and society, with an emphasis on ethical issues. Students will come away from the course with greater understanding of the social and ethical implications of computer use and abuse, an improved ability to think critically and defend their decisions logically, and a reater appreciation for alternate points of view. The focus of the course is on reading, writing and discussion; each week students will complete an assigned reading, write a mini-essay in response, and evaluate the written work of others.

Course Topics: History of computing, networking, and information storage; Essay writing; Ethical theories (Kantianism, utilitarianism, social contract theory, virtue ethics); Networked communications (spam, censorship, filtering); Intellectual property; Privacy; Security; Reliability; Professional Ethics; Artificial Intelligence, globalization, and other changes to the workplace.

Prerequisites: The course requires only third year standing and 3 credits of computer science. Beyond these formal requirements, an ability to speak, read and write fluently in English is essential for success in the class.

Teaching Team

Instructor: Dr. Giulia Toti, gtoti@cs.ubc.ca, (<mailto:gtoti@cs.ubc.ca>) OH Wednesday, 4:00PM - 5:00PM in ICCS 231, or by appointment

Teaching Assistants:

- Raymond Liu, (<mailto:gtoti@cs.ubc.ca>) OH Monday, 4:00PM - 5:00PM room ICCS 238
- Ross Tomita
- Ch Muhammad Daud Virk
- Heng Zhao

Logistics

The class will meet Mon/Wed/Fri from 1:30 PM to 4:00 PM in [Gordon B. Shrum Building \(SHRM\) | Floor: B1 | Room: B1009](#) (<https://learningspaces.ubc.ca/classrooms/shrm-b1009/>).

Textbook: [Ethics for the Information Age, 9th Edition](https://www.pearson.com/en-ca/subject-catalog/p/ethics-for-the-information-age/P200000011623/9780138238759)  (<https://www.pearson.com/en-ca/subject-catalog/p/ethics-for-the-information-age/P200000011623/9780138238759>), by Michael J. Quinn.

Wait List Policy: The course professor is not in charge of the class waitlist, and cannot assess your chances of getting into the class. Please direct any questions you may have to the [CS Department Academic Advisors](#) (<https://www.cs.ubc.ca/students/undergrad/resources/academic-advising/>). If you are on the waitlist and want to take the course, you should participate from the beginning. (1) Students who are active in class and who complete assigned essays and peer reviews will be given waitlist priority (attendance information will be shared with the main office); (2) Students who register for the course late still have to complete all assignments on the same schedule as all other students. Waitlisted students are eligible to submit assignments and to perform peer review before being formally registered.

Piazza: platform for all class-related discussion; please direct all your inquiries through Piazza (for private information, such as grades, you can create private posts directed only to the instructors). Enrol through the Canvas tab, on the left menu.

Agora: platform to manage in class discussions; log in at <https://agora.students.cs.ubc.ca/> (<https://agora.students.cs.ubc.ca/>) using your CWL; enrol code for first time access: 40993.

MTA: platform for quizzes, peer reviews and essays (the latter to be completed at the CBTF); log in at <https://mta.students.cs.ubc.ca/> (<https://mta.students.cs.ubc.ca/>) using your CWL; enrol code for first time access: 520809

Agora and MTA are only accessible through ubcsecure (on campus) or myVPN (off campus):
<https://it.ubc.ca/services/email-voice-internet/myvpn/how-access-myvpn>
(<https://it.ubc.ca/services/email-voice-internet/myvpn/how-access-myvpn>)

Deliverables and Assessments

For this course, you will need to complete the following tasks:

Readings: before each class, you will be assigned a chapter from the textbook. Completing the reading is necessary to be able to engage in class discussions.

In-class participation: active participation in the class is a key element of this course. The class is designed according to a "flipped classroom" model, meaning that lectures aren't used to repeat facts that you can learn from the textbook. Instead, everyone comes to class already exposed to the material, and

we use the time interactively, focusing on discussion and critical analysis. In-person interaction has two key components: exposure to arguments by your peers, and making such arguments yourself.

1. **Exposure to Peer Arguments:** much of each class will be dedicated to discussions, and even if you watch quietly, you'll be exposed to a wide variety of different arguments from your peers.
2. **Active Participation:** of course, you'll learn the most by making your own arguments, responding critically to ideas you hear from your instructor and peers. Some of this participation will occur in breakout sessions; other participation will occur in whole-class discussions. Given the size of the class, it won't be possible for everyone to speak every session. We'll thus assess your participation by the number of times you raise your hand to speak rather than the number of times you speak.

More details regarding in-class participation and its grading can be found further down in the syllabus.

Quizzes: multiple-choice online quizzes will test your comprehension of the readings. You must get a perfect score but can keep trying until you do; every time you fail, you must wait 30 minutes before trying again. Quizzes are not graded but are necessary to be able to complete the assigned peer reviews.

Calibrations: During the first week of the course and every time Mechanical TA indicates that you should, you must complete at least 3 calibrated reviews. We recommend doing even more to improve your grading skills, which will influence your final grade.

Essays: before every Monday and Friday at 1:30PM, you must answer one essay question (some weeks, your choice from two or three given questions). You'll be allowed up to 2500 characters; that's less than one single-spaced page.

- Essay questions must be written in the CS Department's [Computer-Based Testing Facility \(CBTF\) \(https://cbtf.ubc.ca/\)](https://cbtf.ubc.ca/), in-person in the CS Department basement.
- First, you need to enrol for 430 in PrairieTest at this link. (Some of you may already be enrolled; you'll find out when you click the link.)
- Access to the CBTF must be [booked in advance \(https://cbtf.ubc.ca/students/reservations\)](https://cbtf.ubc.ca/students/reservations). Slots are 50 minutes long. Reservations open a few days in advance and can be adjusted up to 30 minutes before your [booked in advance \(https://cbtf.ubc.ca/students/reservations\)](https://cbtf.ubc.ca/students/reservations) reservation starts. The link includes a video with a demo of the booking process.
- You'll need to bring your student ID for each reservation. You're not permitted any electronic devices during your exam. More information about CBTF procedures is [here \(https://cbtf.ubc.ca/students/procedures\)](https://cbtf.ubc.ca/students/procedures).
- If you have an accommodation through the Accessibility Center, you'll most likely be [accommodated at the CBTF \(https://cbtf.ubc.ca/students/accommodations\)](https://cbtf.ubc.ca/students/accommodations).
- You will get the essay prompt in advance. I recommend writing an outline and planning what you intend to write before heading to the CBTF.
- You're welcome to use ChatGPT (or a friend) to help you plan your essay, but you can't bring any materials with you into the CBTF, so you'll have to write in your own words.

- Surveys of students in past offerings of the course indicate that they found 50 minutes long enough to write their essays. If you need more time, you can book a second slot (restricted to the last two or three days of the writing window) and continue to edit (until the firm submission deadline).

Peer reviews: After the essay deadlines, every Monday and Wednesday, you must complete your own peer review of between 3 and 7 randomly assigned students' written questions.

Your final grade will be computed using the following grading scheme:

Course Element	Weight	Due dates
Weekly Essay Questions	70 %	Mondays & Fridays at 1:30 PM
Weekly Peer Review	20 %	Mondays & Wednesdays at 6 PM
In-Class Participation	10 %	Every Class

Observe that this class has no midterm exam and no final exam. Because all weekly essays will be written in the CBTF under exam-like conditions, there is no further need for separate exams. However, a couple of deliverables are due after the last day of class (see schedule below).

Late and Missing Submissions: to provide flexibility for personal circumstances that get in the way of handing in work, at the end of the course we will drop 2 essay and peer review grades, choosing which ones to drop in the way that most benefits you. These grade drops are there to cover possible illness, travel, starting the course late, family obligations, conflicts with other courses, etc, and require no action on your end. Our hope is that you will actually hand in essays and perform peer review every week, meaning that you'll get more practice and that you'll give us more options from which to choose which grades to keep. No further allowance will be made for failure to submit essays or peer review except in truly exceptional circumstances such as a prolonged and serious illness, in which case we recommend you to promptly contact the instructor to discuss solutions.

The picture below summarizes all deadlines and when the CBTF will be open for writing essays.

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
July 6-10	E1 and E2 prompts out		CBTF open (E1)		E3 prompts out 6:00 PM PR (calibr.) 1:30 PM E1/Q1	
July 13-17	E4 prompts out 6:00 PM PR1 1:30 PM E2/Q2 CBTF open (E2)		6:00 PM PR2		E5 prompts out 1:30 PM E3/Q3 CBTF open (E4)	
July 20-24	E6 prompts out 6:00 PM PR3 1:30 PM E4/Q4 CBTF open (E4)		6:00 PM PR4		E7 prompts out 1:30 PM E5/Q5 CBTF open (E6)	
July 27-31	E8 prompts out 6:00 PM PR5 1:30 PM E6/Q6 CBTF open (E6)		6:00 PM PR6		1:30 PM E7/Q7	
August 3-7	Holiday	E9 prompts out	6:00 PM PR7		E10 prompts out 1:30 PM E8/Q8 CBTF open (E9)

Essay and Quiz deadline

CBTF open (regular session)

CBTF open (extra session/opt.)

The table below provides a summary of the topics covered in each class and assigned readings.

Class	Date	Topic	Reading
1	July 6	Introduction and Course Overview (https://canvas.ubc.ca/courses/188853/files/46949615/download? download_frd=1) 	
2	July 8	Writing and Argumentation	Additional Resources below
3	July 10	Ethical Theories - part 1	chapters 2.1-2.6
4	July 13	Ethical Theories - part 2	chapters 2.7-2.12
5	July 15	Networked Communications	chapter 3
6	July 17	Intellectual Property	chapter 4
7	July 20	Information Privacy	chapter 5
8	July 22	Information Privacy	chapter 5
9	July 24	Privacy and the Government	chapter 6

10	July 27	Privacy and the Government	chapter 6
11	July 29	Computer and Network Security	chapter 7
12	July 31	Computer and Network Security	chapter 7
-	August 3	British Columbia Day (no class)	
13	August 5	Computer Reliability	chapter 8
14	August 7	Professional Ethics	chapter 9
15	August 10	Automation and Globalization	chapter 10
16	August 12	AI	TBD

Additional Resources Your readings on essay writing will not come from the textbook. Instead, you'll read the following set of publicly available resources. For your convenience, they're also gathered together into one PDF in MTA.

More Details on In-Class Attendance and Participation

How We'll Choose People To Speak In Class: press the appropriate button in Mechanical TA every time you want to contribute to a discussion. Every time the instructor wants to call on someone they'll press a button, selecting one student at random (identifying them to the instructor by name and, if you choose to upload one, a photo of yourself) and recording *everyone* who raised their hand for participation purposes. Some key details:

- If you're chosen to speak, you will not be chosen to speak again during the same class unless the only hands raised are from students who have already spoken. However, you'll automatically get participation points as though you raised your hand throughout the remainder of the class.
- If you have nothing to say, and clearly just raised your hand for points rather than to contribute to the discussion, you'll get zero points for the entire day, regardless of how many other points you might have been awarded earlier that day.
- If you use MTA to raise your hand while not physically present in the class, this will be treated as a case of academic misconduct and serious penalties will apply. TAs will always be able to see a real-time list of which students have put their hands up, and the instructor has access to UBC Card photos via Workday. We reserve the right to verify physical attendance even for students who are not called upon.

How Participation Affects Your Peer Grading Quota: your starting peer grading quota is 5 essays. If you raise your hand at least once during a class preceding a peer review deadline, you will get a 2-essay reduction for your next quota, recognizing that both class attendance and peer grading give you exposure to peer arguments. For example, if you raise your hand to speak at least once on Monday, you will only be assigned 3 peer reviews for the Wednesday deadline.

How Participation Affects Your Grade: participation is worth a portion of your final grade, as shown in the breakdown above. We'll calculate your participation grade on a per-class basis and then average these grades across the whole term to obtain your final grade. Before averaging, we'll drop the 2 classes in which you have the lowest grades. This means that you can miss 2 classes without any grade penalty. Please use this flexibility to avoid coming to class if you feel sick, or to manage other constraints that may arise in your personal life, deadlines from other courses, etc.

Calculating your Per-Class Participation Grade: your grade will depend on the number of times you raised your hand. To get a grade of 70%, you will need to raise your hands a (small) fixed number of times. We'll award higher grades by comparing your degree of participation to that of other students in the class. Specifically, we'll award you the largest number of points in the table below for which you meet the criterion:

Participate at least this many times	Get this many points (/10)
0	0
1	5
2	6
3	6.5
4	7
The median among students who participated at least once	8
The maximum among students who participated at least once	10

If your number of points is more than 4 but less than the median, we'll linearly interpolate accordingly; likewise if your number of points is more than the median but less than 10. For example, imagine the median was 8 and the maximum was 15. A student who raised his hand 6 times would receive $7 + (6-4)/(8-4) = 7.5$ points, and another student who raised her hand 11 times would receive $8 + 2*(11-8)/(15-8) = 8.86$ points. Observe that the median student will get a grade of 80% for participation (even if the median is 4 or less), and hence half the class will get a grade above 80%.

How Essay Grades Are Calculated

Your essay will be graded between 0 and 5 in the following four dimensions.

- Was the essay well structured, stating a thesis, supporting it with argument(s) that are clearly related to this point and (if relevant) distinct from one another, and linking these arguments in a logical way?
- Did the essay do a good job of making its case, choosing relevant arguments, backing them up with evidence and examples at an appropriate level of detail, and responding to contrary views as appropriate?

- Did the essay demonstrate a good understanding of the course's subject matter, including both the topic and the wider context?
- Was the essay presented clearly and in correct English?

Evaluations on this five point scale will be translated into grades as follows.

Grade	Points
0	0 %
1	25 %
2	50 %
3	65 %
4	80 %
5	100 %

Your final grade will be a weighted average of your grades across the rubric elements, where the first three elements will receive the same weight (0.3125) and the final element will receive 20% of this weight (0.0625).

For each completed essay, you'll receive at least 3 peer reviews (and will perform such reviews yourself; the number will depend on your participation in class the previous week, as described below). These reviews will be double-blind: neither an essay's author nor its reviewer will know the other's identity. Reviews will explain the rationale for your grade in each dimension, using at least 20 words.

Many, but not all, essays will be graded by TAs. Whenever a TA grades your essay, only the TA grade will matter to your essay score, though you will still see your peer grades. Our system will select essays for TA evaluation based on a range of different factors. Every time your peer graders have not yet demonstrated sufficient reliability, TAs will grade alongside them (thus overruling the grades they assign). TAs will also conduct spot checks: when reviewers' scores substantially disagree; when essays receive unusually high scores; and entirely at random.

When no TA grades your essay, your grade will be computed as a weighted average of the grades assigned by your peers, where each peer's weight is proportional to our assessment of their "dependability": our belief about how much we can trust each score based on each grader's behaviour so far in the course (see below). In cases where we consider a peer grade unreliable, we may assign it a weight of zero. We will round your weighted average to the nearest integer grade in each dimension.

If you disagree with the grade you receive on any essay, you can appeal, explaining your concern in 100 words or more. If you do not provide a convincing argument, a TA may reject your appeal without regrading your essay; however, you can refine your argument and resubmit the appeal. If a TA regrades your assignment, you will receive the TA's grade regardless of whether it increases or decreases your score. You can also flag rude or careless reviews and endorse high quality reviews if you'd like to bring them to the attention of TAs without asking for a change in your grade.

Even if your essay was not initially graded by a TA, we may flag it for later review, in which case we will override your peer grade with the TA-assigned grade. There are two key reasons we may do this. First, if our inference algorithm updates its beliefs about your graders' dependability to an extent that your grade would change by two points or more, a TA will override your peer graders. Second, if we become suspicious of a student's grading behaviour (e.g., because of appeals or other spot checks) we will go back and regrade other assignments this student has handled.

Essays will contribute increasing amounts towards your final grade as the term progresses, as follows:

- your first 3 essay grades will be scaled by 0.6;
- your next 3 essay grades will be scaled by 0.8;
- your final 4 essays will be scaled by 1.0.

Your final essay grade will be a weighted average of your individual essay grades using the weights given above. We will drop the 2 essays that produce the largest weighted average overall (i.e., we will not necessarily drop your 2 lowest grades, since later essays are worth more).

How Peer Review Grades Are Calculated

We use [Bayesian inference](https://arxiv.org/abs/2209.01242)  (<https://arxiv.org/abs/2209.01242>) to estimate each student's "dependability" as a reviewer on a weekly basis. The key idea is that calibrations and assignments graded by TAs give us information about which graders are more reliable; this tells us how much to trust each grader on assignments that were not graded by a TA. Your dependability score is our estimate of $sensitivity * (1/variance)$, where *sensitivity* is $(1 - \text{the probability that you choose a grade close to the class average without considering the essay})$ and *variance* is our estimate of your tendency to differ from the essay's true grade when you do consider the essay. The system starts out with the assumption that all students have low dependability scores (specifically, low *sensitivity* and high *variance*). As you grade assignments and perform calibrations, we'll update these beliefs. In particular, doing more calibrations both helps you to get better at grading and gives us evidence of your grading prowess to overwhelm the system's pessimistic initial belief. Note that if you always assign each submission the class average, or if you grade very erratically, our model will assign you a low *sensitivity* probability; you need to properly identify both strong and weak assignments in order to achieve a high dependability score.

For each student we will maintain both a "realistic" (mean) estimate of dependability and a "pessimistic" (lower confidence bound) estimate. Each week, we'll identify those students with pessimistic

dependability estimates below a certain threshold (1.0) and assign them to grade each other; we'll also have a TA grade each such assignment. (Note that this means that if you have a low pessimistic dependability estimate, you'll likely get noisier peer grades, but this won't matter because your grade will be entirely determined by a TA.) The remainder of students (those for whom our pessimistic dependability estimates exceed a threshold) will perform independent peer grading as discussed above. This system ensures that your assignment will either be graded by a TA or will be graded entirely by peers that the system confidently predicts will grade reliably.

If your pessimistic dependability estimate falls below our threshold, you will also be required to perform 3 "calibration" reviews of carefully pre-graded essays from previous years, which will automatically be graded by the system. These calibration reviews are designed to help you learn how to grade well and also how to write good essays. You're also allowed to do extra calibrations (whether your weekly assignment was 3 or 0); this is a particularly good idea when your dependability estimate is low, because doing extra calibrations will teach you to grade better and can also improve your peer grading scores. Your dependability score will start low, but you can increase it quickly by performing additional calibrations and by grading well.

Each week, we'll assign you a peer grading score; overall, these scores will make up the peer grading portion of your final grade given in the overall breakdown above. These grades will be derived from our "realistic" estimates of your dependability score.

We'll scale your peer review grade for each week by
$$\left[\min(\# \text{ of submitted calibrations}, \# \text{ of assigned calibrations}) + \# \text{ of submitted peer reviews} - \# \text{ of reviews marked as insufficient by a TA} \right] / \left[\# \text{ of assigned calibrations} + \# \text{ of assigned peer reviews} \right]$$
. You'll only be eligible to perform peer review when you have completed the corresponding quiz. You can check which reviews were marked as failed by TAs by opening the review page on MTA, where you will see an indication of what the TA graded and comments if any. TAs can also identify reviews as excellent or as insufficient. Reasons for a review being marked as insufficient include overly short, vague, or generic language; reviews that copy-paste the rubric without contributing any additional detail; reviews that don't relate to the essay content; and suspected use of generative AI.

We'll scale your peer review grades in a manner similar to your essay grades:

- your first 3 peer review grades will be scaled by 0.6;
- your next 3 peer review grades will be scaled by 0.8;
- your final 4 peer review grades will be scaled by 1.0.

Your final peer review grade will be a weighted average of your individual peer review grades using the weights given above. We will drop the 2 peer review grades that produce the largest weighted average overall (not necessarily your 2 lowest grades, since later peer reviews are worth more).

Academic honesty and use of AI

Academic Honesty: UBC values academic honesty and students are expected to acknowledge the ideas generated by others and to uphold the highest academic standards in all of their actions.

Plagiarism is a serious offence (see [the CS Department's statement \(https://www.cs.ubc.ca/students/undergrad/resources/academic-integrity/\)](https://www.cs.ubc.ca/students/undergrad/resources/academic-integrity/)) and will be dealt with harshly.

Plagiarism is the unattributed use of any external source (e.g., another student, a web site, a book) in work for which a student takes credit, or the inappropriate use of any external source whether or not attribution is made. The seriousness of the offence depends on the extent to which the student relied upon the external source. You must write in your own words. Any text that you take verbatim from another source must be in quotation marks and followed by a citation. Attempting to gain participation credit while not physically present in class is a serious violation of academic honesty. Potential penalties include a zero for the full term's participation grade and formal disciplinary proceedings at the university level.

Generative AI: Students are permitted to use generative artificial intelligence tools, such as ChatGPT, to gather information, review concepts and produce drafts of essays. Final essays will be written in the CS Department's [Computer-Based Testing Facility \(CBTF\) \(https://cbtf.ubc.ca/\)](https://cbtf.ubc.ca/) and students will not be able to refer to such drafts while writing them. Use of AI tools is not permitted for peer reviewing; doing so will be considered an academic honesty infraction.

All the content and material found in this course is the property of the authors and is **only** intended for the students registered in this course. Public sharing or copying without permission is forbidden and penalties may apply to all involved.
