Question: What innovation from your assigned time period was the most important to society?

Answer:

The Electronic Numerical Integrator and Computer which was 1st introduced in 1946. ENIAC is the first electronic general purpose computer of its kind and was financed by the US during World War II but it wasn't in the war. It performed accurately artillery computations 2400x faster than people with a desk calculator which was how these calculations were done before the machine. Because it could be reprogrammable, it was able to perform other varieties of tasks which enabled important scientific and engineering advances such as cosmic ray, nuclear technologys, random numbers, weather predictions and more. The machine also signaled and demonstrated that computers can significantly increase the productivity of certain tasks and considerably improve society. This advancement of technology really forced people to think of computers differently. They no longer are tools that assist humans, but they actually do most the work themselves. Lessons learned from building the ENIAC also helped pave the way for future computers. Also influenced the first commercial computers. ENIAC is almost like a prototype for what most modern computers evolved from.

The result:

Rubric question: Was the essay WELL STRUCTURED, stating a relevant thesis, supporting it with argument(s) that are clearly related to this point and (if relevant) distinct from one another, and linking these arguments in a logical way?

Your answer: (2) The thesis is stated, but the essay struggles to adhere to an essay format. Logical progression of argument(s) and counterargument(s) is present but some content is irrelevant and/or redundant. (2.5 points)

The correct answer (2) The thesis is stated, but the essay struggles to adhere to an essay format. Logical progression of argument(s) and counterargument(s) is present but some content is irrelevant and/or redundant. (2.5 points)

Your reasoning: The essay does not have a proper structure but instead discusses different details about the ENIAC. There is no explicit thesis that is stated.

The suggested reasoning: The essay identifies a main idea and several supporting points, but the lack of an introduction and conclusion weakens organization. Transitions between arguments are also abrupt.

Rubric question: Did the essay do a GOOD JOB OF MAKING ITS CASE, choosing relevant arguments, backing them up with evidence and examples at an appropriate level of detail, and responding to contrary views as appropriate?

Your answer: (2) The essay stated many facts about the topic in question, but it is not possible to determine what are arguments, evidence, or opinions. (2.5 points)

The correct answer (2) The essay stated many facts about the topic in question, but it is not possible to determine what are arguments, evidence, or opinions. (2.5 points)

Your reasoning: The essay mostly contains a collection of different facts about the thesis rather than establishing a claim and supporting this throughout the essay with facts.

The suggested reasoning: The essay makes valid points about ENIAC's speed, versatility, and influence,

but it doesn't present counterarguments or deeper evidence. Many arguments are asserted without further support.

Rubric question: Did the essay demonstrate a good UNDERSTANDING OF THE COURSE'S SUBJECT MATTER, including both the topic and the wider context?

Your answer: (4) Essay contains relevant course materials, demonstrating generally correct or reasonable understanding of the material and topic. No significant errors are present. (4.0 points)

The correct answer (3) Essay contains mostly relevant course materials but makes some incorrect or inaccurate statements and/or interpretations or includes some errors of omission (failure to introduce important facts). Personal opinions may be presented as fact. (3.25 points)

Your reasoning: With regards to the subject matter, the author demonstrates their knowledge on the topic, but does not provide insightful understanding or creativity.

The suggested reasoning: The essay shows a correct understanding of ENIAC's historical significance, mentioning its wartime origins and later applications. However, it simplifies some aspects and could use more context.

Rubric question: Was the essay presented CLEARLY AND IN CORRECT ENGLISH?

Your answer: (3) Essay requires some work to understand and may contain some errors such as run-on sentences, spelling mistakes, incomplete or fragmented sentences, etc. May include language that is inappropriate for the audience and/or topic. (3.25 points)

The correct answer (3) Essay requires some work to understand and may contain some errors such as run-on sentences, spelling mistakes, incomplete or fragmented sentences, etc. May include language that is inappropriate for the audience and/or topic. (3.25 points)

Your reasoning: The overall wording feels a little bit "clunky" and does not flow very well. There are run-on and fragmented sentences, and some other grammar errors.

The suggested reasoning: Several grammatical and stylistic errors distract from the flow. Sentences are understandable but clunky in places.

Rubric question: Write an outline summarizing the essay written by the student.

Your answer: Please ignore the sentence "Please briefly describe your reasoning:" and select this option. Write your outline of the essay in the textbox below. (0.0 points)

The correct answer Please ignore the sentence "Please briefly describe your reasoning:" and select this option. Write your outline of the essay in the textbox below. (0.0 points)

Your reasoning: Thesis: The Electronic Numerical Integrator and Computer was the most important innovation from this time period. Argument 1: The ENIAC was much faster than humans using desk calculators. Argument 2: The computer was reprogrammable and could therefore do a wide variety of tasks. Conclusion: Society has learned from the adoption of the ENIAC computer which influenced the development of commercial computers.

The suggested reasoning:
