Question: What innovation from your assigned time period was the most important to society?

Answer:

The most important innovation from 1901 to 1914 was the invention of the airplane by the Wright brothers. Before the airplane, long-distance travel and transportation of goods relied mostly on trains, ships, and horses. These methods were slow, sometimes unreliable, and limited in terms of speed and distance. The airplane changed the way people could move, making the world feel much smaller and more connected.

The first successful powered flight in 1903 showed that humans could travel through the air, and within a few years, aviation technology improved rapidly. Airplanes started being used for mail delivery and short-distance passenger travel, which was much faster than trains in certain cases. This increased efficiency made it possible for businesses to expand trade routes and for ideas and goods to spread more quickly.

Airplanes also had a huge impact on the military. During this time period, countries began to see the potential of using aircraft for reconnaissance and later for combat. This was a drastic shift because it changed the way wars could be fought, and nations had to rethink their strategies and investments in defense.

Although early airplanes were still fragile and could only carry small amounts of weight, the innovation paved the way for the entire aviation industry. Over time, airplanes would become more reliable, capable of longer flights, and accessible to more people, eventually transforming both business and leisure travel. Without the Wright brothers' invention, the speed of globalization and the modern transportation systems we rely on today would have been much slower.

The result:

Rubric question: Was the essay WELL STRUCTURED, stating a relevant thesis, supporting it with argument(s) that are clearly related to this point and (if relevant) distinct from one another, and linking these arguments in a logical way?

Your answer: (5) All argument(s) and counterargument(s) lend support to a clearly stated and relevant thesis within a well-structured essay format. All argument(s) and counterargument(s) are distinct from one another and follow a strong logical progression that does an excellent job of supporting the thesis. (5.0 points)

The correct answer (4) All arguments and counterarguments lend support to a clearly stated and relevant thesis within a standard essay format. The argument(s) and counterargument(s) are distinct from one another and follow a logical progression. (4.0 points)

Your reasoning: The thesis, arguments, and conclusion are all clearly laid out. The arguments are distinct from one another. There is a natural logical progression from the first argument into the second argument. The thesis is stated directly and easily recognizable.

The suggested reasoning: The essay has a clear thesis (airplane as most important innovation 1901–1914) and generally follows an essay format with paragraphs for context, impacts, and conclusion. However, there is only a very basic counterargument, and transitions between economic, transportation, and military points are somewhat abrupt and not really tied together.

Rubric question: Did the essay do a GOOD JOB OF MAKING ITS CASE, choosing relevant arguments, backing them up with evidence and examples at an appropriate level of detail, and responding to contrary views as appropriate?

Your answer: (4) Arguments are clearly stated and generally support the thesis; these arguments are backed up with generally relevant evidence at a broadly appropriate level of detail. Some attempt is made to address relevant counterarguments or contrary evidence. (4.0 points)

The correct answer (4) Arguments are clearly stated and generally support the thesis; these arguments are backed up with generally relevant evidence at a broadly appropriate level of detail. Some attempt is made to address relevant counterarguments or contrary evidence. (4.0 points)

Your reasoning: The arguments were clearly laid out, but the supporting evidence was not very precise which resulted in rather general statements such as "aviation technology improved rapidly". Although some of the weaknesses of the aircrafts at this time were discussed, there was no formal use of counterargument and rebuttal.

The suggested reasoning: The essay makes several relevant claims (faster travel, trade expansion, military applications) and provides examples, but the arguments are mostly descriptive rather than deeply analytical. Without strongly engaging with counterarguments or alternative innovations, the persuasiveness is limited.

Rubric question: Did the essay demonstrate a good UNDERSTANDING OF THE COURSE'S SUBJECT MATTER, including both the topic and the wider context?

Your answer: (5) Essay contains arguments, evidence, and concepts that broaden the scope of understanding, demonstrating creative and insightful understanding of the topic alongside balanced use of the course's subject matter. (5.0 points)

The correct answer (4) Essay contains relevant course materials, demonstrating generally correct or reasonable understanding of the material and topic. No significant errors are present. (4.0 points)

Your reasoning: The author brings up multiple unique points and details that show they properly understand the topic they are discussing.

The suggested reasoning: The essay accurately references early aviation history and societal impacts of airplanes, including military and commercial use. It demonstrates a correct understanding of the period but doesn't connect the innovation to broader theoretical or long-term societal concepts in depth.

Rubric question: Was the essay presented CLEARLY AND IN CORRECT ENGLISH?

Your answer: (5) Essay communicates ideas and concepts clearly and concisely. Minimal errors may be present and can be easily ignored. (5.0 points)

The correct answer (5) Essay communicates ideas and concepts clearly and concisely. Minimal errors may be present and can be easily ignored. (5.0 points)

Your reasoning: The author communicates their ideas clearly. There are no errors that noticeably impact the flow of reading.

The suggested reasoning: The essay is clear, concise, and well-written, with no distracting spelling or grammar errors. The flow is readable and appropriate for the class audience.

Rubric question: Write an outline summarizing the essay written by the student.

Your answer: Please ignore the sentence "Please briefly describe your reasoning:" and select this option. Write your outline of the essay in the textbox below. (0.0 points)

The correct answer Please ignore the sentence "Please briefly describe your reasoning:" and select this

option. Write your outline of the essay in the textbox below. (0.0 points)

Your reasoning: Thesis: The most important innovation from 1901 to 1914 was the invention of the airplane by the Wright brothers. Argument 1: Before the airplane, long-distance travel and transportation of goods relied mostly on trains, ships, and horses; planes made travel much faster. Argument 2: Airplanes had a great impact on the military. Conclusion: Planes started off quite slow and unreliable, but over time they significantly improved which was only possible because of the initial invention by the Wright Brothers.

The suggested reasoning:
